

CASH DEPOSIT SYSTEM CDS 707

CASH DEPOSIT SYSTEM

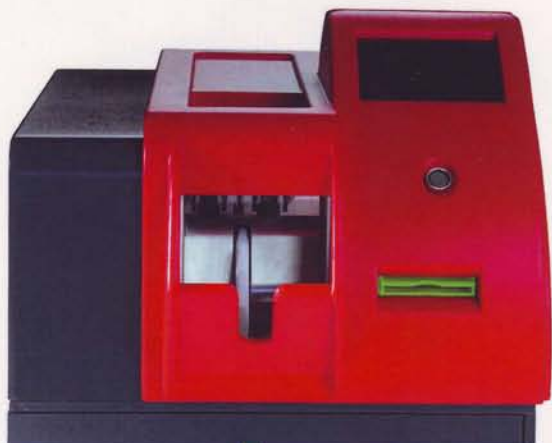

CASH DEPOSIT SYSTEM CDS 707

CDS 707 represents the new challenge of CIMA: the retail industry.

A deposit unit as small as smart, as essential as high performing is the right solution to meet any of your needs. The top plate, extremely compact, is made of an input box which contains up to 150 notes at a time, a simple and essential notes' transport, the authenticity sensor Cash Ray 90, a top cover customizable in colour and an exit box. The 8 bks/s input speed is ideal to manage high cash volumes. A practical user interface equipped with PC board completes the work: the operator will identify himself through the Dallas key or the badge reader and

will follow his deposit on a colourful and reliable touch screen, and will then print his own receipt. At the same time the on line system will bank the data. As there is no escrow function, the banknotes, when rejected, will end up in the exit box, or, when accepted, will drop into the bag inside the safe. CIMA will offer you two kinds of bags: the high capacity canvas bag containing up to 5000 banknotes and locked by a cover and a manual seal: and the self-sealing disposable bag containing up to 3500 banknotes, whose safety is doubly guaranteed by a dual locking system. By "Self-sealing" we mean that only one operator is needed to pull the bag out of the safe and secure your cash. By "Disposable" we mean that you'll reduce costs, you'll use the bag only once, you'll keep several spare bags in the branch without taking a lot of space and the repair costs and the dead batteries will belong to the past.

Thanks to its competitiveness and its high speed, CDS 707 is ideal to you retailers, wholesalers, amusement parks managers and any time you want to cut off the CIT high costs.

It's high time to "all-in"!

All in: All the market performances in only one small space:

- ◆ high speed: 8 bks/s
- ◆ CR 90 for all currencies
- ◆ self-sealing bag

TECHNICAL SPECIFICATIONS:

Safe available in:
8mm steel, UL 291 24 H

Size:
(W) 410 mm x (D) 660 mm x (H) 1040 mm

Weight:
170 Kg in the 8 mm safe version
220 Kg in the UL 291 24 H safe version

Electrical features:
Power Voltage: 85/264 VAC, 250 W
